INDEX TO SUBJECTS

Actinomycin-DNA bindings, first-neighbor specificities of by circular dichroism 69
Adenine and serine, midcycle doubling of uptake rates of, in *Saccharomyces cerevisiae* 15
Admittance, membrane, representation of 279
Adsorption isotherm study of phosphatidylcholine hydration 169
Anesthetics, local, and pH effect on use-dependent block of sodium channels in frog muscle 343
Area compressibility, elastic, of red cell membrane, osmotic correction to measurements 307
ATP, effect on sodium-calcium and calcium-calcium exchange in squid axons 79
Axons, squid, cation and ATP effects on sodium-calcium and calcium-calcium exchange 79

Bacteria, bacteriophages, and physics of chemoreception 193
Bacteriorhodopsin, resonance Raman kinetic spectroscopy on microsecond time scale 369
Band shapes, observed, and electronic structure of polyenes related to visual chromophore 377
Bindings, DNA-actinomycin, first-neighbor specificities, circular dichroism 69
Block, use-dependent, of sodium channels in frog muscle, local anesthetics and effect of pH 343
Bound water in lysozyme, thermal-stimulated pressure and current studies 273
Buoyant density of chromaffin granules, osmometer model for changes in 33

Calcium diffusion in transient and steady states in muscle 113
Calcium-sodium and calcium-calcium exchange in squid axons, effects of cations and ATP 79
Cations, internal and external, effect on sodium-calcium and calcium-calcium exchange in squid axons 79
Cell, human red, hemolysis rates in subsecond to second range 181
—, red, osmotic correction to elastic area compressibility measurements 307
Channels, sodium, in frog muscle, local anesthetics and effect of pH on use-dependent block of 343
Chemoreception, physics of 193
Choline, phosphatidyl-, dipalmitoyl, monodomain samples of, with water and other ingredients 137
—, phosphatidyl-, hydration of 169
Chromaffin granules, osmometer model for changes in buoyant density of 33
Chromatium vinosum high-potential iron protein, low-lying excited state determined by electron paramagnetic resonance 23
Chromophore, visual, electronic structure of polyenes related to 377
Circular dichroism, first-neighbor specificities of actinomycin-DNA bindings 69
—dichroism of proteins, tyrosyl, and side-chain mobility 233
Compressibility, elastic area, of red cell membrane, osmotic correction to measurements 307
Conduction velocity in nonmyelinated nerve fibers 1
Contraction of single muscle fibers, fluctuations in tension during 315
Current, thermal-stimulated, studies of bound water in lysozyme 273

Decay, fluorescence polarization, in membranes 289
Density, buoyant, of chromaffin granules, osmometer model for changes in 33
Des-B1-phenylalanine insulin and insulin, used to test tyrosyl circular dichroism of proteins 233
Dichroism, circular, and first-neighbor specificities of actinomycin-DNA bindings 69
—of proteins, tyrosyl circular, and side-chain mobility 233
Diffraction, lamellar X-ray, from hydrated oriented multilayers of sarcoplasmic reticulum 245
—, light, and sarcomere dynamics of skeletal muscle fibers 221
Diffusion of calcium in transient and steady states in muscle 113
—and physics of chemoreception 193
Dipalmitoyl phosphatidylcholine, monodomain samples of, with water and other ingredients 137
DNA-actinomycin bindings, first-neighbor specificities of by circular dichroism 69
Doubling of uptake rates of adenine and serine in *Saccharomyces cerevisiae* 15
Dynamics of sarcomeres in single skeletal muscle fibers, light diffraction studies 221

Elastic area compressibility measurements on red cell membrane, osmotic correction of 307
Electronic structure of polyenes related to visual chromophore, model for band shapes 377
Electron paramagnetic resonance determination of low-lying excited state in *Chromatium vinosum* high-potential iron protein 23
Electrooptic modulator, transverse, and laser used in phase-shift fluorometer for subnanosecond lifetime measurements 335
Energy transfer, triplet state, in proteins 383

Equilibration times in sedimentation experiments reduced by extrapolation method 153
Equilibrium experiments, sedimentation, reducing equilibration times by extrapolation 153
Erythrocyte hemolysis rates in subsecond to seconds range 181
—membrane, osmotic correction to elastic area compressibility measurements 307
Excited state, low-lying, in *Chromatium vinosum* high-potential iron protein, determined by electron paramagnetic resonance 23
External and internal cation and ATP effects on sodium-calcium and Calcium-calcium exchange in squid axons 79
Extrapolation method for reducing equilibration times in sedimentation equilibrium experiments 153

Fibers, nerve, nonmyelinated, conduction velocity in 1
—, single muscle, fluctuations in tension during contraction 315
—, single muscle, light diffraction studies of sarcomere dynamics 221
First-neighbor specificities of actinomycin-DNA bindings by circular dichroism 69
Flagellated microorganisms, hydrodynamic theory of swimming 49
Fluctuations in tension during single muscle fiber contraction 315
Fluorescence polarization decay in membranes 289
Fluorometer, phase-shift, using laser and transverse electrooptic modulator for subnanosecond lifetime measurements 335
Frog muscle and local anesthetics, effect of pH on use-dependent block of sodium channels 343

Granules, chromaffin, osmometer model for changes in buoyant density 33

Hemolysis rates, erythrocyte, in subsecond to seconds range 181
High-potential iron protein, *Chromatium vinosum*, low-lying excited state determined by electron paramagnetic resonance 23
Human red cell hemolysis rates in subsecond to seconds range 181
Hydrated oriented multilayers of sarcoplasmic reticulum, lamellar X-ray diffraction from 245
Hydration of phosphatidylcholine 169
Hydrodynamic theory of swimming of flagellated microorganisms 49

Insulin and des-B1-phenylalanine insulin used to test side-chain mobility calculation of tyrosyl circular dichroism of proteins 233
Internal and external cation and ATP effects on sodium-calcium and calcium-calcium exchange in squid axons 79
Iron protein, *Chromatium vinosum* high-potential, low-lying excited state determined by electron paramagnetic resonance 23
Isotherm study, adsorption, of phosphatidylcholine hydration 169

Kinetic spectroscopy, Raman resonance, of bacteriorhodopsin on microsecond time scale 369

Lamellar X-ray diffraction from hydrated oriented multilayers of fully functional sarcoplasmic reticulum 245
Laser and transverse electrooptic modular used in phase-shift fluorometer for subnanosecond lifetime measurements 335
Lifetime measurements, subnanosecond, phase-shift fluorometer for 335
Light diffraction studies of sarcomere dynamics in single skeletal muscle fibers 221
Lipid, dipalmitoyl phosphatidylcholine, monodomain samples of 137
Local anesthetics and pH effect on use-dependent block of sodium channels in frog muscle 343
Low-lying excited state in *Chromatium vinosum* high-potential iron protein, determined by electron paramagnetic resonance 23
Lysozyme, bound water in, thermal-stimulated pressure and current studies 273

Magnetic resonance, proton nuclear, and hydration of phosphatidylcholine 169
Membrane admittance, representation of 279
—, fluorescence polarization decay in 289
—, red cell, osmotic correction to elastic area compressibility measurements 307
Microorganisms, flagellated, hydrodynamic theory of swimming 49
Microsecond time scale, resonance Raman kinetic spectroscopy of bacteriorhodopsin on 369
Midcycle doubling of uptake rates of adenine and serine in *Saccharomyces cerevisiae* 15
Mobility, side-chain, and tyrosyl circular dichroism of proteins 233
Modulator, transverse electrooptic, and laser used in phase-shift fluorometer for subnanosecond lifetime measurements 335
Monodomain samples of dipalmitoyl phosphatidylcholine with varying concentrations of water and other ingredients 137
Motility of flagellated microorganisms, hydrodynamic theory of 49
—of slime molds and physics of chemoreception 193
Multilayers, oriented hydrated, or sarcoplasmic reticulum, lamellar X-ray diffraction from 245
Muscle, calcium diffusion in transient and steady states in 113
—fibers, single, tension fluctuations during contraction 315
—fibers, skeletal, light diffraction studies of sarcomere dynamics 221

—, frog, and local anesthetics, effect of pH on use-dependent block of sodium channels 343

Nerve fibers, nonmyelinated, conduction velocity in 1
Nonmyelinated nerve fibers, conduction velocity in 1
Nuclear magnetic resonance, proton, and hydration of phosphatidylcholine 169

Osmometer model for changes in the buoyant density of chromaffin granules 33
Osmotic correction to elastic area compressibility measurements on red cell membrane 307

Paramagnetic resonance, electron, determination of low-lying excited state in *Chromatium vinosum* high-potential iron protein 23
pH effect on use-dependent block of sodium channels in frog muscle 343
Phase-shift fluorometer using laser and transverse electrooptic modulator for subnanosecond lifetime measurements 335
Phenylalanine, des-B1-, insulin and insulin, used to test tyrosyl circular dichroism of proteins 233
Phosphatidylcholine, dipalmitoyl, monodomain samples of, with water and other ingredients 137
—, hydration of 169
Physics of chemoreception 193
Polarization decay of fluorescence in membranes 289
Polyenes, electronic structure of, related to visual chromophore, model for band shapes 377
Pressure, thermal-stimulated, and bound water in lysozyme 273
Protein, *Chromatium vinosum* high-potential iron, low-lying excited state determined by electron paramagnetic resonance 23
—, triplet state energy transfer in 383
—, tyrosyl circular dichroism of, and side-chain mobility 233
Proton nuclear magnetic resonance and hydration of phosphatidylcholine 169

Raman kinetic spectroscopy, resonance, of bacteriorhodopsin on the microsecond time scale 369
Reception, chemo-, physics of 193
Red cell hemolysis rates in subsecond to seconds range 181
—cell membrane, elastic area compressibility, osmotic correction to measurements 307
Representation of membrane admittance 279
Resonance, electron paramagnetic, determination of low-lying excited state in *Chromatium vinosum* high-potential iron protein 23
—, proton nuclear magnetic, and hydration of phosphatidylcholine 169
—Raman kinetic spectroscopy of bacteriorhodopsin on microsecond time scale 369
Reticulum, sarcoplasmic, lamellar X-ray diffraction from hydrated oriented multilayers of 245
Rhodopsin, bacterio-, resonance Raman kinetic spectroscopy on microsecond time scale 369

Saccharomyces cerevisiae, midcycle doubling of uptake rates of adenine and serine 15
Sarcomere dynamics in single skeletal muscle fibers and light diffraction 221
Sarcoplasmic reticulum, fully functional, lamellar X-ray diffraction from hydrated oriented multilayers of 245
Seconds to subseconds range, human red cell hemolysis rates in 181
Sedimentation equilibrium experiments, reducing equilibrium times by extrapolation 153
Serine and adenine, midcycle doubling of uptake rates of, in *Saccharomyces cerevisiae* 15
Side-chain mobility and calculation of tyrosyl circular dichroism of protein 233
Skeletal muscle fibers, light diffraction studies of sarcomere dynamics 221
Slime mold motility and physics of chemoreception 193
Sodium-calcium exchange in squid axons, effect of cations and ATP 79
Sodium channels in frog muscle, local anesthetics and effect of pH on use-dependent block of 343
Specificities, first-neighbor, of actinomycin-DNA bindings by circular dichroism 69
Spectroscopy, resonance Raman kinetic, of bacteriorhodopsin on microsecond time scale 369
Squid axons, cation and ATP effects on sodium-calcium and calcium-calcium exchange 79
Steady states in muscle, calcium diffusion in 113
Structure of polyenes, electronic, related to visual chromophore, model for band shapes 377
Subnanosecond lifetime measurements, phase-shift fluorometer for 335
Subsecond to seconds range, erythrocyte hemolysis rates in 181
Swimming of flagellated microorganisms, hydrodynamic theory of 49

Tension fluctuations during single muscle fiber contraction 315
Thermal-stimulated pressure and current studies of bound water in lysozyme 273
Transfer of triplet state energy in proteins 383
Transient and steady states in muscle, calcium diffusion in 113
Transverse electrooptic modulator and laser used in phase-shift fluorometer for subnanosecond lifetime measurements 335
Triplet state energy transfer in proteins 383
Tyrosyl circular dichroism of proteins and side-chain mobility tested with insulin and des-B1-phenylalanine insulin 233

Uptake rates of adenine and serine in *Saccharomyces cerevisiae* 15

Use-dependent block of sodium channels in frog muscle, effect of pH 343

Velocity, conduction, in nonmyelinated nerve fibers 1

Visual chromophore, electronic structure of polyenes related to 377

Water, bound, in lysozyme, thermal-stimulated pressure and current studies 273

—, varying concentrations of, in monodomain samples of dipalmitoyl phosphatidylcholine 137

X-ray diffraction, lamellar, from hydrated oriented multilayers of sarcoplasmic reticulum 245

Yeast, *Saccharomyces cerevisiae*, midcycle doubling of uptake rate of adenine and serine in 15

Statement of Ownership, Management, and Circulation required by Act of 12 August 1970; Section 3685, Title 39, United States Code: Biophysical Journal. Published monthly by The Rockefeller University Press, at 1230 York Avenue, New York 10021 for the Biophysical Society, Washington, D.C. 20007. Editor, V. Adrian Parsegian, P.O. Box 30239, Bethesda, Md. 20014. Owned by the Biophysical Society, Washington, D.C. 20007, nonprofit organization authorized to mail at special rates. Following statistics represent 12 month average and number nearest to date of filing: copies printed for each issue, 2315, sales through dealers, street vendors, counter sales, 0; mail subscriptions, 1952; total paid circulation, 1952; free subscriptions, 50; office use, left-over, unaccounted for, spoiled, 313; net press run, 2315. Single issue nearest filing date, October 1977. (Signed, W. A. Bayless, Director, The Rockefeller University Press)

CONTENTS

October 1977 volume 20 number 1

1 A Study of Conduction Velocity in Nonmyelinated Nerve Fibers. *Gen Matsumoto and Ichiji Tasaki*

15 Midcycle Doubling of Uptake Rates of Adenine and Serine in *Saccharomyces cerevisiae*. *H. E. Kubitschek and R. W. Edvenson*

23 Electron Paramagnetic Resonance Determination of a Low-Lying Excited State in *Chromatium vinosum* High-Potential Iron Protein. *Haywood Blum, J. C. Salerno, Roger C. Prince, J. S. Leigh, Jr., and Tomoko Ohnishi*

33 An Osmometer Model for Changes in the Buoyant Density of Chromaffin Granules. *S. J. Morris, H. A. Schultens, and R. Schober*

49 Hydrodynamic Theory of Swimming of Flagellated Microorganisms. *Jose Garcia de la Torre and Victor A. Bloomfield*

69 First-Neighbor Specificities of Actinomycin-DNA Bindings by Circular Dichroism. *F. S. Allen, M. B. Jones, and U. Hollstein*

79 Effects of Internal and External Cations and of ATP on Sodium-Calcium and Calcium-Calcium Exchange in Squid Axons. *M. P. Blaustein*

113 Calcium Diffusion in Transient and Steady State in Muscle. *Robert E. Safford and James B. Bassingthwaighte*

November 1977 volume 20 number 2

137 Monodomain Samples of Dipalmitoyl Phosphatidylcholine with Varying Concentrations of Water and Other Ingredients, *L. Powers and P. S. Pershan*

153 An Extrapolation Method for Reducing Equilibration Times in Sedimentation Equilibrium Experiments. *John J. Correia, David A. Yphantis, and George H. Weiss*

169 Hydration of Phosphatidylcholine. Adsorption Isotherm and Proton Nuclear Magnetic Resonance Studies. *D. A. Wilkinson, H. J. Morowitz, and J. H. Prestegard*

181 HUMAN RED CELL HEMOLYSIS RATES IN THE SUBSECOND TO SECONDS RANGE. AN ANALYSIS. *Paul C. Anderson and Rex E. Lovrien*

193 PHYSICS OF CHEMORECEPTION. *Howard C. Berg and Edward M. Purcell*

221 LIGHT DIFFRACTION STUDIES OF SARCOMERE DYNAMICS IN SINGLE SKELETAL MUSCLE FIBERS. *Paul J. Paolini, Kenneth P. Roos, and Ronald J. Baskin*

233 SIDE-CHAIN MOBILITY AND THE CALCULATION OF TYROSYL CIRCULAR DICHROISM OF PROTEINS. IMPLICATIONS OF A TEST WITH INSULIN AND DES-B1-PHENYLALANINE INSULIN. *A. Wollmer, J. Fleischhauer, W. Strassburger, H. Thiele, D. Brandenburg, G. Dodson, and Dan Mercola*

245 A DIRECT ANALYSIS OF LAMELLAR X-RAY DIFFRACTION FROM HYDRATED ORIENTED MULTILAYERS OF FULLY FUNCTIONAL SARCOPLASMIC RETICULUM. *L. Herbette, J. Marquardt, A. Scarpa, and J. K. Blasie*

Brief Communications

273 THERMAL-STIMULATED PRESSURE AND CURRENT STUDIES OF BOUND WATER IN LYSOZYME. *Sérgio Celaschi and Sérgio Mascarenhas*

279 THE REPRESENTATION OF MEMBRANE ADMITTANCE. *M. W. P. Strandberg*

December 1977 volume 20 number 3

289 A THEORY OF FLUORESCENCE POLARIZATION DECAY IN MEMBRANES. *Kazuhiko Kinosita, Jr., Suguru Kawato, and Akira Ikegami*

307 OSMOTIC CORRECTION TO ELASTIC AREA COMPRESSIBILITY MEASUREMENTS ON RED CELL MEMBRANE. *E. A. Evans and R. Waugh*

315 FLUCTUATIONS IN TENSION DURING CONTRACTION OF SINGLE MUSCLE FIBERS. *Julian Borejdo and Manuel F. Morales*

335 A PHASE-SHIFT FLUOROMETER USING A LASER AND A TRANSVERSE ELECTRO-OPTIC MODULATOR FOR SUBNANOSECOND LIFETIME MEASUREMENTS. *I. Salmeen and L. Rimai*

343 LOCAL ANESTHETICS. EFFECT OF pH ON USE-DEPENDENT BLOCK OF SODIUM CHANNELS IN FROG MUSCLE. *Wolfgang Schwarz, Philip T. Palade, and Bertil Hille*

Brief Communications

369 RESONANCE RAMAN KINETIC SPECTROSCOPY OF BACTERIORHODOPSIN ON THE MICROSECOND TIME SCALE. *Alan Campion, M. A. El-Sayed, and James Terner*

377 ELECTRONIC STRUCTURE OF POLYENES RELATED TO THE VISUAL CHROMOPHORE. A SIMPLE MODEL FOR THE OBSERVED BAND SHAPES. *Russell Hemley and Bryan E. Kohler*

383 TRIPLET STATE ENERGY TRANSFER IN SEVERAL PROTEINS. *D. A. Grainger and A. M. Nishimura*

387 INDEXES TO VOLUME 20
